

Snow Leopard Multiple Files Instructions

Apple Macintosh OS 10.6 (Snow Leopard) -- Multiple Files Instructions

1. Create a folder on the machine the files are being downloaded to -- name it whatever you like (in this example, we created the folder on the Desktop & named the folder "MacOS_10_6")
2. Using your web browser, download all 3 of the following files from iSDP to this folder. When prompted, type in your username -- remember to precede your username with: NIH\

[OS X 10.6 \(Snow Leopard\) Disk 1](#)

[OS X 10.6 \(Snow Leopard\) Disk 2](#)

[OS X 10.6 \(Snow Leopard\) Disk 3](#)

3. Launch Terminal from /Applications/Utilities
4. After each of the following Terminal commands, press the Return key
5. Type in: `cd ~/Desktop/MacOS_10_6/`
6. Type in: `cat MacOS_10_6_Part_* > MacOS_10_6.dmg`
7. This will take some time to complete
8. The resulting MacOS_10_6.dmg file can now be used to make a bootable dual-layer DVD of Mac OS 10.6
9. The "MacOS_10_6_Part_" files can now be deleted
